

Rahul Chigullapalli

Analytics / Data Engineer | Python • SQL • Snowflake • Azure Data Factory • ETL/ELT

(201) 423-5266 | chigullapallirahul@gmail.com | LinkedIn | Jersey City, NJ | Open to Relocation

PROFESSIONAL SUMMARY

Data professional with 5+ years building integration pipelines, data quality controls, and analytics-ready datasets across enterprise platforms. Engineered REST API integrations processing 1.5TB+ of infrastructure data into Snowflake and SQL Server; hands-on with Python, SQL, ETL/ELT design, Azure Data Factory, Databricks, and dbt. Strong data modeling, lineage, and governance foundation from managing quality across 20M+ configuration items.

TECHNICAL SKILLS

Languages: SQL (CTEs, window functions, query optimization), Python (pandas, REST API clients)

Data Platforms: Snowflake (incl. SnowMirror replication), Azure SQL Server, Cosmos DB, PostgreSQL, BigQuery, Redshift

Data Pipelines & Transformation: ETL/ELT design, batch data pipelines, Azure Data Factory, Databricks, dbt, Power Query, Power Automate, API Data Integration

Data Quality & Governance: Data Quality Testing & Validation, Data Lineage, Data Profiling, Reconciliation & Deduplication, Metadata Management, CMDB Governance (ServiceNow)

Cloud & BI: Azure, Microsoft Fabric, AWS (Bedrock, QuickSight), Power BI, Tableau

EXPERIENCE

W.R. Berkley — Data Analyst (Data Integration & Quality) | Jersey City, NJ

Jul 2025 – Present

- Engineered REST API integrations across ServiceNow CMDB, Tenable, Tanium, Infoblox, and SnowMirror using Python and SQL — batch data pipelines processing 1.5TB+ of infrastructure data into analytics-ready datasets with automated quality checks.
- Designed reconciliation and deduplication logic across 20M+ configuration items, detecting orphaned assets, duplicate records, and ownership gaps that fed automated remediation workflows.
- Defined lineage, ownership, and lifecycle standards for an enterprise Digital Asset & Application Inventory, improving data reliability, compliance visibility, and audit readiness.
- Piped Azure Cost Management, Cosmos DB, and SQL Server data into Power BI models tracking AI token consumption, enabling leadership to reduce AI infrastructure spend.
- Partnered with infrastructure and security engineering teams to validate data-driven rationalization insights informing modernization and retirement decisions.

Technoid — Data Analyst | Piscataway, NJ

Sep 2024 – Jul 2025

- Automated weekly reporting workflows with Power Query and Power Automate, reducing manual effort 40% (10 → 6 hours/week).
- Built SQL data models feeding Power BI dashboards, improving decision accuracy 30% and cutting reporting turnaround 35%.
- Drove 200% revenue growth (\$100K → \$300K) through pricing analysis and customer segmentation built on cleaned, well-modeled data.

Wolters Kluwer — Data Analyst | New York, NY

Jan 2024 – May 2024

- Defined knowledge retrieval (RAG) logic, regulatory data sources, and business rules for a GenAI compliance chatbot now supporting 80+ clients annually.
- Restructured a 700+ record regulatory licensing dataset with SQL and Python, improving search efficiency 40% and saving 70+ hours of manual analysis.
- Documented data lineage and governance standards for chatbot data flows, cutting client onboarding time 40%.

Innovatio Hub — Data Analyst | Hyderabad, India

Dec 2019 – Nov 2022

- Implemented metadata capture and data quality controls across IoT device datasets, reducing system errors by 40%.
- Processed and analyzed IoT telemetry, surfacing 300+ error patterns in Tableau and reducing issue identification time by 22%.
- Built KPI pipelines and dashboards enabling interventions that cut energy consumption 35% (~\$15K annual savings).

EDUCATION

MS, Information Systems — Stevens Institute of Technology, Hoboken, NJ

Jan 2023 – May 2024

BS, Mechanical Engineering — Jawaharlal Nehru Technological University, Hyderabad, India

Jul 2018 – Aug 2022
